I was looking for the wheelbase, dry weight , ground clearance and overall length. I'm trying to decide whether I want a Wombat or 100B+. I assume the 100B and B+ are virtually identical.

Ok, here are all the street legal 90, 100s and 125s. Hopefully you know the Models. The only manual I do not have is the 92B+ but I am guessing the specs for the B and B+ are REAL CLOSE!

MODEL	Width	Height	Length Overall	Wheelbase	Ground Clearance	Dry Weight
90	33.3"	47" *	71"	47"	8"	155
92	33.3"	49.65" *	72.8"	47"	8.07"	175
92B	31"	33"	76"	49.6"	11.2"	189
94	32.3"	30.4"	80.5"	53"	9"	208
99	35.4"	31.1"	78.7"	52.36"	8.9"	228.8
02	35.4"	31.7"	78.9"	52.36"	9.6"	224.7
03	35.4"	32.6"	80.9"	54"	10.4"	237.4

* The early Manuals ONLY had overall Height - not seat Heights.

All other Heights are seat height and obviously Widths are STOCK handle bars.

Once you pick your bike, you should get a should get the Owners' Manual and the Shop Manual. Just something you NEED to own. You can order them right here on this site. Originals are available sometimes from sources, I got all mine 12 years ago so no idea on other availability.

Hope this helps,

Bob in MD.
